

RESIN FACTS AND CARE

Our resin soaker tubs and sinks are cast in a joint-free mold using a polyester-aluminum trihydrate blend material that hardens to a solid surface. Resin's non-porous surface naturally resists stains, scratches and discoloring. Sometimes referred to as "man-made stone", its extreme durability helps to preserve its silky matte finish. This versatile material also allows more freedom of design since it can be cast into countless shapes and forms.

Care and Maintenance

Clean water will remove most dirt from your resin tub. Use only mild cleansers that are safe for painted surfaces when necessary. Do not use abrasives, acids or ammonia. Wipe dry after each use to retain original beauty.

Small Scratch Repair:

If a minor scratch should occur, rinse any dirt from surface with clean water and rub in small circular motions using #800 grit sandpaper until scratch disappears. Follow with #1200 sandpaper to smooth area. Dry with a soft towel and finish by polishing with automobile polish.
